**Instructions For Ordering Mold Plates,  
Spacer Plates, or Transition Plates**

Please State:

1. The weight of patty in ounces you require
2. **“F” means Full in Weight.** This gives you a patty that is a little heavy. “F” plates are the most popular.  
  
**“M” means Medium Weight.** The patties that are formed are as close to exact as possible.  
  
**“S” means Shy in Weight.** The patty weight will be slightly under weight.
3. The fraction denotes the thickness of the patty to be formed.
4. The shape of the patty, ie: Round, Square, Oval, etc.
5. The model of the machine the plate is to be used on.

EXAMPLE: 5F 3/8 Round mold plate for the model Pacesetter

--This mold plate would be 3.2 ounces at 3/8” thick.

--Your patty weights may vary because of many outside factors such as fat content, moisture content, forming temperature of meat, etc. Patty-O-Matic will gladly manufacture special plates to give the desired weight, thickness, and shape. When ordering a mold plate, be sure that you also have the corresponding spacer plate or transition plate.

EXAMPLE: All 1/2” thick mold plates use a spacer plate or transition plate stamped 1/2. This does not mean the spacer plate or transition plate is 1/2” thick. It means the spacer or transition plate is to be used with a 1/2” mold plate as a set.

When ordering a complete set, order this way:

- (1) 5F 1/2” Round Mold Plate and 1/2” Transition Plate for a Model Protégé.  
(The mold plate will be stamped 5F 1/2 to indicate 5 patties per pound at 1/2” thick.)

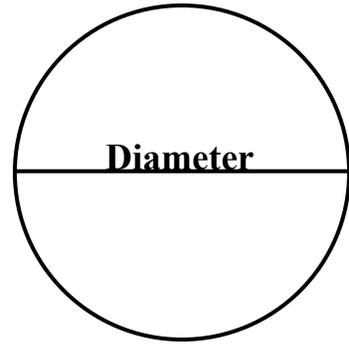

**Someone at the Factory will be happy to assist you when ordering**

2	2-15/32	2-7/32	2-1/16	1-27/32	1-11/16

#### **Meatball Mold Plate Notes:**

- All Models are capable of making from 2,000 to 8,000 meatballs per hour.
- All models can be modified to produce meatballs up to 1 1/2" thick.
- A heater or air ejecting assembly may be necessary if the product is sticky. The heater assembly heats the knock out cup, which prevents the product from sticking to it.
- Meatball Mold Plates can produce one, two, three, or four meatballs at one time, depending on the meatball size.
- Air Grooves are provided in every mold plate to prevent air locks and to insure fully filled cavities. A filled mold plate cavity provides exact portion control.
- Patty-O-Matic's exclusive feed mechanism helps the meatballs to round out better during the cooking process.
